

GIVE NEW LIFE TO OLD FAVORITES.

If you've ever had to put your favorite shirt right back in the washing machine for a second time, it's probably because of odor-causing bacteria. Unprotected surfaces of apparel and footwear support the growth of bacteria—and washing alone is rarely enough. The only way to truly combat the foul, lingering smell is by combating the bacteria. And AEGIS® does exactly that.

A REVOLUTIONARY, BONDED ANTIMICROBIAL.

The active ingredient in AEGIS® forms a protective coating that can molecularly bond with fabrics upon application. Bacteria are attracted to the coating's positive charge, and upon coming into contact with the treated fibers, those odor-causing culprits quickly die. Plus the technology works continuously to protect fabrics between launderings.

TYPICAL APPLICATIONS:

- Sportswear
- Socks
- Fiberfill
- Footwear
- Home Textiles

IDEAL FABRICS:

- Leather
- Cotton
- Polyester
- PU Foam

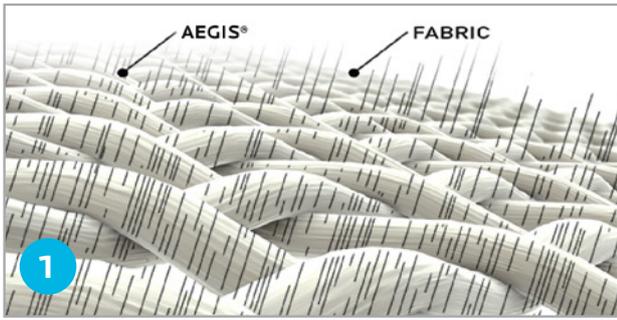

SAFETY MEETS DURABILITY.

AEGIS® is a safe and effective antimicrobial technology that's been proven to eliminate odor-causing bacteria for more than 30 years. It's compatible with high-performing water repellent systems, as well as with many other auxiliaries used on apparel and footwear. And it works to reduce odor-causing bacteria for more than 25 launderings. That means it lengthens the life of the products that utilize its technology.

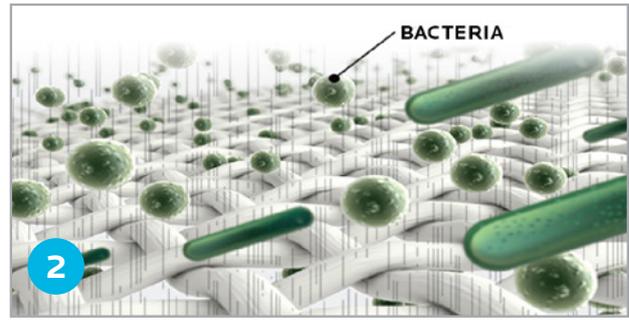

- **SIMPLE.** Applied to the fabric during the normal manufacturing process—no extra steps or extra equipment.
- **SUSTAINABLE.** Free of arsenic, tin and other heavy metals or nano particles that can remain in the environment after use.
- **VERSATILE.** Applications include polyester, polyester-blends, cotton, fleece, insulation, fiberfill, foam, leather and synthetic leather.
- **EFFECTIVE.** Charge-disruption mode of action eliminates microbes that cause odor, stains and deterioration.

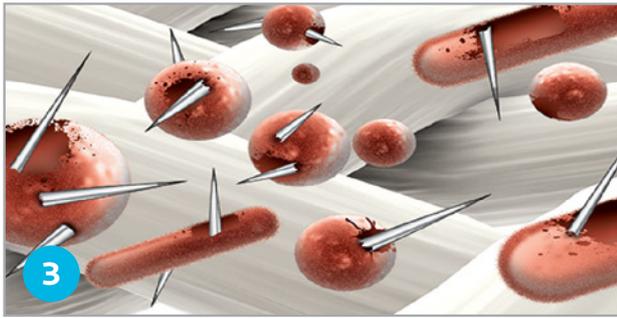

HOW IT WORKS:

AEGIS® IS BONDED TO THE FIBERS DURING MANUFACTURING.

BACTERIA ARE ATTRACTED TO THE TREATED FIBERS.

AEGIS® PUNCTURES THE BACTERIA'S MEMBRANE DESTROYING IT.

THE BACTERIA DIE AND NO LONGER CREATE ODOR OR STAINS.

MORE THAN CUTTING-EDGE TECHNOLOGY.

Many variables go into producing consistent, high-quality and durable textiles, so we work closely with manufacturers to help make implementation as simple and seamless as possible. That includes ensuring that our technologies only enhance your product's characteristics. AEGIS's® status as the global leader in odor control is due in part to the analytics and support that go into this process—and our solutions work properly and consistently because of it.

We're about more than innovative technologies, though. From pricing power and durability requirements to marketing support and regulatory counsel, AEGIS® supplies partners—no matter where they may be—with thorough and advanced services to help deploy our odor control products.

Contact us today to learn how AEGIS® can differentiate your product and give you a more powerful position in the growing activewear, leisurewear or footwear markets.
